1. Description

The SHK-VBS3-SE/SHK-VBS3-SF current sensor is based on Hall and open-loop design. It is suitable for DC, AC pulsed and any kind of irregular current measurement under the isolated conditions.

Typical applications

- AC Variable speed drives
- Inverter
- Electric welder power supply
- Switched model power supplies (SMPS)

General parameter

Parameter	Symbol	Unit	Value
Working temperature	T_a	°C	-40 ~ 125
Storage temperature	T_{stg}	°C	-40 ~ 125

Absolute maximum rating

Parameter	Symbol	Unit	Value
Supply voltage	V_{cc}	V	6.5
Electrostatic discharge voltage	$U_{ESD\ HBM}$	kV	2

Remark: the unrecoverable damage may occur when the product works on the conditions over the absolute maximum ratings. Long-time working on the absolute maximum ratings may cause the degradation on performance and reliability.

4. Applications

Customers have to compute the Average value of Uout 1 and Uout 2, This can be achieved through the circuit shown in schematic 1 or any other method defined by the customer (as shown in schematic 2).

Schematic 1:

Example of transducer output averaging with passive components.

Resistance: $R \geq 1\text{ K}$, 1 %, 100 ppm/ °C, 100 mW, 75 V, -40 ... 155 °C, 0603 (or better)

Schematic 2:

Example of transducer averaging with a micro-controller.
